

SPECIAL NOTES

- 1. The metric measurements shown herein have been converted from the U.S. customary (inch-pound) dimensions of existing furniture designs (shown in parentheses) using the simplified rule from conversion and rounding as given in the Metric Guide for Naval Ship Systems Design and Acquisition.**

- 2. These metric measurements are provided to facilitate the preparation of habitability arrangement designs in programs which require that the metric system be used on drawings and in specifications. It is not intended that the dimensions of existing furniture designs be changed to match these metric measurements exactly.**

- 3. However, metric furniture which has approximately the same measurements as the U.S. customary (inch-pound) furniture shown herein may be used in designs prepared for programs that allow the use of metric equipment/components, subject to NAVSEA 05H approval.**
